

Why We Built a Full-Stack Web Application

A model alone can't create impact. It must be accessible, understandable, and practical for the clinicians, patients, and researchers it's meant to serve.

Secure Authentication

Persistent Prediction History

Explainable AI

AI-Powered Assistance

Downloadable Reports

Chosen over Streamlit to support production deployment and real-world use

Four Layers, One Integrated Platform

Dida never generates medical predictions — all risk scores come directly from the trained XGBoost model; the assistant only explains them.

Built for Every Stakeholder

Prediction

Users complete a short health assessment and instantly receive a personalised diabetes risk score.

Explainability

SHAP & LIME visualisations reveal the most influential risk factors behind every prediction.

Education

Resources on diabetes, risk factors, prevention, symptoms, and disease progression.

AI Assistant — Dida

Conversational, plain-language guidance based on the model's explanations.

Secure Google Sign-In

Downloadable PDF Reports
